"Pressestimmen 'Anger lies at the heart of an impressive number of significant social and psychological problems. It is startling, then, to realize how little research and training is devoted to its understanding and treatment. In *Treatments for Anger in Specific Populations* a thoughtful group of anger experts discuss anger management techniques that have been used across a wide range of people and settings. For those who work with difficult clients dealing with major anger or hostility issues, check out this practical and research-informed book.'

**--James W. Pennebaker, Regents Centennial Professor and Chair, Department of Psychology, University of Texas at Austin** 'Ephrem Fernandez has succeeded in integrating academic research and practice in this impressive and unique collection of chapters on anger treatment in a range of contexts, both clinical and non-clinical. He also succeeds in drawing together conclusions from the different chapters into a coherent set of principles to guide interventions. I

fully recommend this book to all those interested in anger and its treatment.' -- **John Archer, Professor of Psychology, University of Central Lancashire, Preston, UK, Editor-in-chief, *Aggressive Behavior*** 'At a time when the preoccupation with an overmedicalization of mental and emotional difficulties generates lively debate, this book is a very welcome contribution to understand the link between normal and dysfunctional anger-one of the emotions that may have very powerful effects on social behavior and interaction. Appropriately, the central issues of anger management and emotion regulation are given central play and a host of information on treatment options is provided. This book will be an important milestone for the future development of work on anger-related emotional problems.' -- **Klaus Scherer, Ph.D., Director, Swiss Centre for Affective Sciences, University of Geneva** 'What can the volume *Treatments for Anger in Specific Populations: Theory, Application, and Outcome*, edited by Ephrem Fernandez, add [to what we know about anger]? The simple answer is, a great deal! I found it a joy to read, and, although I have been in the anger business for many years, I learned

quite a bit. Fernandez wanted to create an edited volume wherein anger that is experienced and expressed in different populations would be examined by experts in those areas. He was certainly successful. [...]The book is the collective effort of 29 authors whose names will generally be well recognized as leaders in the anger field [...] and t]he summary chapter by Fernandez is top-notch.' -- **Howard Kassinove, PhD, ABPP; Fellow, American Psychological Association; Fellow, American Psychological Society, *PsycCRITIQUES*** Fernandez provides us with a book in which every clinician will find something new to learn and something useful to apply in the consulting room, clinic, or lecture hall. I highly recommend this book.' -- *Journal of Clinical Psychiatry* Über den Autor und weitere Mitwirkende **Ephrem Fernandez, PhD**, is Professor of Psychology at the University of Texas at San Antonio, previously on the faculty at SMU and a visiting scholar at the University of California, Berkeley. He has published more than 70 scientific articles, book chapters, and books. He has delivered more than 100 scholarly presentations at international venues and events including the Swiss Center for Affective

Sciences, the Australian National University, the University of Wisconsin, Madison, the University of Amsterdam, the First Asian Conference in Psychology, Singapore, and the meeting of the Society for the Exploration of Psychotherapy Integration in Santiago, Chile."
