"Amazon.de Lovers of the series of coloring books that teach us all about our innards will be pleased to find the brain among the many systems deemed worthy of receiving colorful attention. Although unconventional, this is a valuable aid created especially for students of anatomy and physiology, nursing, psychology, and medical technology--plus those of us simply interested in the inner workings of the mind (at least, those of us with crayons!). Human Brain Coloring Book, by Dr. Kapil Gupta, includes 125 plates of diagrams with accompanying explanations of each system's location and function. The workbook's practicality lies in the interactive learning experience it offers and, when completed, the fully colored and labeled resource it becomes for the student or clinician. Each chapter concludes with a self-assessment that lists the major terms covered and includes a brief quiz on system functions. Synopsis College professors want students to learn by doing rather than by traditional methods of memorization. In the Human Brain Colouring Workbook, students colour in the brain parts and functions explained in each lesson. ' Alle Produktbeschreibungen".
